

Iranians Oppose Producing Nuclear Weapons, Saying It Is Contrary to Islam

April 7, 2008

But Most Insist on Iran Producing Nuclear Fuel

[Questionnaire / Methodology \(PDF\)](#)

[Listen to NPR's Day to Day host Alex Chadwick interview Steven Kull on the findings of the poll](#)

A majority of Iranians do not believe their country should produce nuclear weapons, but most still think it is "very important" for Iran to develop nuclear fuel.

A new survey by WorldPublicOpinion.org finds that three out of five Iranians (58%) think that producing nuclear weapons is contrary to Islam, while only one in four (23%) think that it is permissible.

At the same time most Iranians (81%) consider it "very important" for "Iran to have a full-fuel-cycle nuclear program" which would give Iran the capacity to produce nuclear fuel for energy production.

A nationwide random sample of 710 Iranians was surveyed from January 13 to February 9 by WorldPublicOpinion.org, an international research project managed by the Program on International Policy Attitudes at the University of Maryland, in partnership with Search for Common Ground. The study also included focus groups conducted in Tehran.

A large majority of Iranians (66%) endorse their government's position that Iran should have "a full fuel cycle nuclear energy program" but not develop nuclear weapons. Only 20 percent say Iran should develop nuclear weapons and 5 percent think Iran should not pursue a full-fuel-cycle program.

A majority of Iranians also approve of the Nuclear Non Proliferation Treaty (NPT), which prohibits Iran from developing nuclear weapons. Three out of five Iranians (59%) say it was a good idea for Iran to sign the NPT and 63 percent say Iran should continue to be part of the NPT. Nearly three out of four (72%) say they support the goal of eliminating nuclear weapons as stated in the NPT.

Because, with higher levels of enrichment such nuclear fuel could be used for nuclear weapons, the UN Security Council has called for Iran to not produce nuclear fuel. Fifty-eight percent of Iranians support the idea of making a deal with the UN Security Council that would allow Iran to have a full-cycle nuclear program while giving the International Atomic Energy Agency "permanent and full access throughout Iran to ensure that its nuclear program is limited to energy production" and not producing nuclear weapons.

A March 2008 poll for the BBC World Service found that publics in 17 out of 31 countries approved such a deal, including the United States (55%), Britain (71%) and France (56%).

"While it is not clear if the Iranian government would accept permanent and full UN access to ensure Iran is not developing nuclear weapons, most of the Iranian people are ready to accept it," comments Steven Kull, director of WorldPublicOpinion.org. "Most Iranians are ready to foreclose developing nuclear weapons."

Though Iranians support the NPT they have concerns about its long term viability. Most of those polled (75%) believe there are countries with "secret programs for developing the capacity to produce nuclear weapons." Estimates vary from a few countries (24%), to some (28%), to many (24%). A mere 3 percent say there are no countries with secret nuclear programs.
